## SureStart™ - Battery Protector

## AUTOMOTIVE

### APPLICATIONS

**STOP DEAD  
BATTERIES\***

**SureStart™ Battery Protector is the intelligent solution!**

- **SureStart™** protects the battery in your vehicle from accidental discharge.
- **SureStart™** automatically shuts off power drain sources leaving starting power in the battery.
- **SureStart™** is *programmable* to accommodate both heavy and light electrical loads as well as special requirements.
- **SureStart™** is the *intelligent* solution because it is far too easy for one of the vehicles electrical accessories to inadvertently run your battery down to the point where your vehicle won't start

**SureStart™** is the *intelligent* solution for every **auto** battery application. It is especially *intelligent* for "critical" situations:

- While listening to your radio with your key in the accessory position.
- Or when your kids leave a reading lamp on in your minivan.
- Or when you leave your car with the parking lights on for that "quick" run into the store only to come back to a dead battery.
- Or at the tailgate party where you got your TV and/or radio playing.
  - ✓ When it's time to leave you are stranded with a dead battery.

**SureStart™** will prevent accidental battery failure. Your battery is subject to complete failure without normal charging.

Especially in limited use situations as well as intentionally run accessories, such as stereo, TV, games, etc.

**Note:** Batteries drained below 25% are exposed to substantially reduced capacity.

**SureStart™ Battery Protector** is the *intelligent* solution to your starting power problems. Ask your dealer for more information or check our web site at:
